Only one comment. Instead of using Falcon Refinery, use National Oil and Recovery Corporation.

Chris - we can add the warning if you think it would be beneficial. If they do not have any temporary storage right now, it might be just as useful for you to verbally point that out to them and do a quick record of communication to the file or note in the PollRep. Amy/Ed any thoughts?

I incorporated your changes and am resending it out to the others, so they have the most current version to review. I also added some of the names for the acronyms I had used. (Sam will catch it anyway).

Excellent--

Made a few comments. Question: Presumably he will have to take tanks out of service to complete service. Do we want to mention that any temporary storage that he brings in (ie frac tanks) need to have containment and be compliant with SPCC plan?

Don-

Look at the section IV. Order. Seems appropriate any comments.
